SUMMARY

Senior web developer with 20+ years building marketing websites and owning them end to end after launch: development, hosting, domains and DNS, integrations, tracking and site performance. Owned the marketing sites at B2B SaaS company Seamless.AI and fintech Questis alongside their applications. At Seamless.AI I set up and launched Google Optimize A/B and multivariate tests, tied ClickFunnels campaign funnels to Google Tag Manager conversion tracking, and built HubSpot, Salesforce, Stripe and Zapier integrations. Hands-on with HTML, CSS/SCSS, JavaScript, PHP, MySQL and React; custom PHP WordPress themes; GA4 and the data layer; Core Web Vitals, WCAG 2.1 AA, technical SEO and schema. Uses AI tools daily to build, test and debug, and reviews every change before it ships.

SELECTED WORK

- **islasuds.com** — Custom Shopify Hydrogen storefront (React, TypeScript, GSAP scroll-driven product storytelling, GA4). Monthly bar sales roughly doubled in the first few months, and a second wholesale retailer found the brand through the site
- **kalmiawoods.com** — My own mountain retreat near Lake Jocassee: a scroll-driven marketing site and an admin dashboard where family and friends share a calendar and reserve the cabin (Astro, React, Next.js, TypeScript, GA4)
- **barrierislandbonsai.com** — My own bonsai company: a specimen-by-specimen gallery and store, an admin dashboard for the trees, and a WebGL Bonsai Studio (Nuxt, Vue, Supabase, GA4)
- **holycity.live** — Live flood, heat, construction and public-safety dashboards for Charleston on NOAA, USGS, FEMA and City/County open data (HTML, CSS, vanilla JavaScript, GA4). Its rain model reproduces 12 of 15 city flood closures from the October 4, 2026 storm
- **shotcowboystyle.github.io** — Portfolio held to Lighthouse budgets (Performance 90+, Accessibility 95+, SEO 95+) and WCAG 2.1 AA, with Playwright and axe-core tests in CI (Astro, TypeScript, GSAP, Three.js)

SKILLS

Languages & Frameworks: HTML5, CSS3, SCSS/Sass, JavaScript (ES6+), TypeScript, PHP, MySQL, React, Node.js, Vue, Next.js, Nuxt, Astro, Python

WordPress & CMS: WordPress since 2003 (custom PHP themes), Shopify (Liquid themes, Hydrogen)

Tracking & Analytics: Google Tag Manager, GA4, data layer, pixels and conversion events, Google Search Console, Umami, Datadog, automated daily and weekly reporting

Experimentation & CRO: A/B and multivariate test implementation in any platform: variant build, targeting, GTM/GA4 goals, flicker control, QA and launch (Google Optimize, ClickFunnels); landing pages; conversion tracking; feature-usage and adoption analysis

Integrations & Forms: HubSpot, Salesforce, Zoho, Zapier, webhooks, REST APIs, reCAPTCHA, Stripe, Supabase, Shopify Storefront API

Performance, Accessibility & Security: Core Web Vitals, Lighthouse performance budgets, WCAG 2.1 AA, axe-core, privacy and consent settings, email authentication (SPF, DKIM, DMARC)

SEO & AI Search: technical SEO/AEO/GEO, schema markup (JSON-LD), metadata, sitemaps and canonical URLs

Infrastructure: domain and DNS management, AWS (Route 53, CloudFront, S3, EC2), self-hosted mail (Stalwart)

Testing & Workflow: Playwright cross-browser and cross-device testing, Vitest, Git/GitHub, GitHub Actions, Figma, AI coding tools with custom skills and automated checks

Other: Technical editor, *Stylin' with CSS*, 3rd ed. (New Riders, 2012); English (native), Spanish (intermediate)

EXPERIENCE

Independent Web Developer & Consultant — Charleston, SC Oct 2025 – Present

- Own client and company sites end to end as the single technical contact: build, launch, hosting, domains and DNS, content updates, GA4 tracking and production support (Isla Suds, Kalmia Woods, Barrier Island Bonsai).

- Started Isla Suds on a Shopify Liquid theme. When Liquid couldn't deliver the scroll-driven product storytelling or acceptable Lighthouse scores, recommended and delivered a rebuild as a custom Shopify Hydrogen storefront in React and TypeScript with GSAP motion.
- Use multiple AI coding tools daily with custom skills and automated checks (unit, end-to-end and accessibility tests, lint and typecheck hooks, dependency updates, security monitoring), and review and test their output before every merge.
- Integrated a Supabase back end for Barrier Island Bonsai and NOAA, USGS and FEMA feeds for Holy City Live.
- Host email for Kalmia Woods and Barrier Island Bonsai on a self-hosted Stalwart mail server, managing their MX, SPF, DKIM and DMARC records.

Lasso — Senior Software Developer Dec 2023 – Sep 2025

- Standardized code formatting, linting and type checking across the codebase.
- Migrated a legacy Vue 2.7 codebase to Vue 3 with the Composition API and TypeScript.
- Built a design system and component library kept in two-way sync with Figma.
- Built a block-based document editor on TipTap (ProseMirror) with custom nodes and extensions, which customers used to create proposals, invoices and pitch decks.

Seamless.AI (B2B SaaS) — Principal Software Architect Apr 2018 – Feb 2023

- Owned the company marketing site alongside the application: development, landing pages, forms, tracking and releases.
- Set up, QA'd and launched A/B and multivariate tests on the marketing site with Google Optimize (variants, targeting, conversion goals), and connected ClickFunnels campaign funnels to Google Tag Manager for conversion tracking; implemented cookie consent and reCAPTCHA on its forms.
- Built CRM export integrations that pushed customers' Seamless contacts into their own HubSpot, Salesforce, Zoho and other CRMs, and worked with HubSpot as Seamless's own CRM.
- Built webhooks that handled events from Stripe, Salesforce, the browser extension and other systems, plus Zapier integrations that moved data between the app and customers' external tools.
- Built the React web app for a B2B sales-intelligence platform from design-team Figma hand-offs, and owned its front-end architecture.
- Integrated Stripe subscription billing with tiered plans that controlled each user's feature access.
- Ran production hosting and delivery on AWS (Route 53 DNS, CloudFront CDN, S3, EC2, Elastic Beanstalk, Cognito, IAM), provisioned through CloudFormation and monitored in CloudWatch.
- Architected data ingestion from a browser extension into an S3 data lake handling 100GB+ per day, using web workers for parallel processing so results displayed in near real time.

Questis — Senior Software Engineer Feb 2015 – Apr 2018

- Architected the company's production fintech web app to meet financial-industry security and compliance requirements.
- Designed a multi-tenant architecture with separate data storage and user management for each customer.
- Owned the company's WordPress marketing site alongside the application, including cookie consent and reCAPTCHA on its forms.

SPARC — Front-end Developer and Designer Feb 2013 – Feb 2015

- Built the front-end design system from scratch, including reusable components and a responsive layout.
- Designed the brand identity and style guide for an in-house employee recognition platform.

PeopleMatter — Interface Engineer Nov 2009 – Feb 2013

- Front-end engineer on the flagship SaaS hiring platform, from applicant through onboarding to managed employee, in a large multi-team codebase.
- Implemented the JavaScript framework for front-end reactivity and state management.

Zestra Laboratories — Director, IT Solutions Jun 2002 – Jul 2008

- Ran analytics and conversion tracking on the marketing site for SEO and paid ad campaigns.
- Ran the company website, e-commerce, order management and fulfillment, and internal systems for a consumer-products company, plus its domains, DNS and self-hosted mail server.

Vibrance Associates, LLC — Web Developer and IT Manager Feb 2003 – Aug 2006

- Developed and maintained custom WordPress themes in PHP; monitored traffic and engagement and handled SEO.
- Maintained health websites and a visitor portal for Drs. Jennifer and Laura Berman's Discovery Health audience.
